

# AppCobra

## Create iPhone / iPad / iPod Touch, Android, or Windows Mobile Apps Directly in AppCobra.

*AppCobra allows you to create apps and webpages that run as webapps, or natively on Apple, Android, and Windows Mobile devices.*

Feature	Benefit
Utilize HTML5	Create apps that use HTML5 to work natively on Apple devices, Android, and Windows Mobile devices.
Use Mobile Device Features	Utilize geolocation, accelerometer, swiping, finger gestures, and much more to make your apps come to life.
HTML 5 Manifests	Create HTML 5 manifests that allow apps to download from the web totally to a user device.
Use startup icons and images.	Create apps with startup icons, startup screens, and more. Act and behave like any other app.
No coding required	Not one line of coding is required to use all the features mentioned in this brochure.
Warnings	Optional warnings to display when orientation is incorrect, when webapps needs to be saved as app, when app requires iOs to run.
Graphics Provided	Select from a range of 1000's of included images and icons, or create your own with the KP features.
Add multimedia	Add/record audio and video to your apps. Synchronize to audio.
Test Live on Our Server	Upload to our server directly from AppCobra to test live on your device.
Reuse Content	The same code you use for your app can run on other mobile devices, or other browsers, including desktops.
Use WebKit styles and animations.	Automatically apply WebKit based styles and animations to any element.
Automatic Thumbnails, Indexes, Bookmarking, and More...	Automatically create a series of page thumbnails which the user can use finger gestures to scroll through and select a page to move to. Or generate an index. Or bookmarks with one simple command.
iPhone/iPad Simulator	Test your apps locally in our iPhone/iPad Simulator.
