KP-Simulator™ Capture live screen movies, edit, and export to Flash, EXE, Windows Media, FLV, or Animated GIF.

Create Live Screen Movies. Capture from your computer screen, edit frames, add text boxes, arrows, audio, interaction, frame movement, high quality resampling, title frames, and change timing. Create low or high quality Flash, EXE files, Animated GIF, Windows Media Format, or FLV (Flash Movie), movies. Perfect for e-learning and software simulations. You can even print frames directly, or export to Microsoft Word or Microsoft PowerPoint to help create printed documentation.

Feature	Benefit
Screen Movie Capture	Capture screen movies from your desktop. Capture from full screen, a window, or screen region. Captures all mouse movements, mouse clicks, screen changes, and keyboard presses.
Capture Type	Use auto movie capture, capture when a certain key is pressed, and/or when keyboard or mouse buttons are pressed.
Export	Export as Flash, EXE files, Windows Media Format, Animated GIF, or FLV. You can also export to Word, PowerPoint, or Windows Compiled Help.
Audio	Capture audio during capture, or add later after editing. Audio can be added on a step by step, or as a complete background track.
Editable Frames	After capturing movie, edit any frame, delete frames, add frames, adjust timing, and add other elements before export.
Text Boxes	Add high quality text boxes on any frame. Automatically add text boxes, correctly positioned, on mousedown frames.
Options	Determine which frames are mousedowns, keypresses, or have this automatically determined.
Add Interaction	Create hotspots for user interaction. Add pauses in the movie.
Title Pages	Add a title page to your movie.
Playback	When exported to Flash, use auto-loading, and the playbar that allows the user to play, pause, resume, stop and navigate around the movie. Customize the playbar with your own graphics.
Screen Movement	Move the screen around so that you are working with parts of the screen at any one time.
Watermarks	Add images, logos and watermarks to any frame, or the entire movie.
Resize	Use high quality resampling so larger movies can be played back on smaller screens.
Cursor editing	Change, move and edit cursor appearance for any frame
Audio	Convert text to audio for multimedia presentations, or record your own audio directly.
Create Printed Documentation	Export to Word or PowerPoint, or print directly from KP-Simulator.
Spell Checker and Thesaurus	Proof and correct your work directly in KP-Simulator.
Quality Settings	Determine video and audio quality export settings.
SCORM Compliant	Create SCORM compliant HTML pages to use your movies in a Learning Management System.
